Books

B. Kedem and K. Fokianos: "Regression Models for Time Series Analysis", *John Wiley*, Hoboken NJ, pp. 360, 2002.

This text summarizes results for the analysis of time series data following generalized linear models. In particular, it develops partial likelihood inference for binary, categorical and count time series. In addition, it includes recent work on other areas related to discrete-valued time series such as hidden Markov models, state space modeling and spatial prediction. Its focus is both on theory and applications.
